Artel Announces General Availability of a Low Cost, Multi-format, 3G-SDI Capable Signal Generator and Test Module

Westford, MA – November 1, 2010 – Artel is pleased to announce general availability of the DLT710, a low cost multi-format 3G-SDI capable signal generator and test module. The DLT710 is an innovative DL4000 based module designed for simple, automatic link verification of all serial digital video formats.

The module functions as both a signal generator and functional test monitor for 3G-SDI, HD-SDI, SD-SDI, DVB-ASI and ATSC formats making it ideal for verification of single or multi-format video links. What makes the DLT710 unique is its ability to generate and verify both compressed and uncompressed video formats along with the unique feature of automatically sequencing thru all pre-selected formats. In less than five minutes users can verify as operational a circuit supporting 3G-SDI, HD-SDI, SD SDI, DVB-ASI and ATSC. Used in conjunction with DL-Manager, the module will log CRC and EDH errors, loss of video plus other errors and activities. The DLT710 is compatible with any DL4000 platform chassis and can be packaged in a ruggedized travel case along with the DL4100 single slot chassis.

“Customers told us testing video circuits is a time consuming process requiring numerous pieces of expensive test equipment designed for other applications. With that in mind Artel engineers went to the drawing board and came up with a space efficient, low cost product that dramatically simplifies and automates the process,” said Richard Dellacanonica, President of Artel Video Systems. “The DLT710 is another example of our continued commitment to supporting the unique requirements of Telcos, CLECs, Cable TV Operators, and Video Service Providers.”

About Artel Video Systems

Artel Video Systems develops, manufactures, and markets high performance broadcast quality video transport hardware. Since 1981 Telecommunication companies, Video Service Providers, Cable TV Operators and Broadcasters have deployed Artel products in their most critical video transport applications.
